To Whom It May Concern,

As a valued Patton partner, we wanted to inform you that the functions of the following SmartNode models are equivalent to the SmartNode 5400 and will therefore pass the same tests.

- SN5480
- SN5490

Patton has replaced the SmartNode 5400 with these two new products to better meet customer needs for IPv6 capabilities. Although these are new products, they are based on the exact same hardware and software platform as the SmartNode 5400 with the following differences:

- Increased Memory
- Increased Flash

- SN5480
 - The hardware is equivalent to the SN5400 without WAN

As a result the 5480 will fulfill the same VoIP ESR requirements and pass the same VoIP ESR tests as the SN5400.

- SN5490
 - The hardware is equivalent to the SN5400 with WAN

As a result the SN5490 will fulfill the same ESR requirements and pass the same ESR tests as the SN5400 with WAN.

If you have any further questions, please contact us at sales@patton.com or +1 301-975-1000.

Sincerely,

Tyler Delin
SmartNode Product Manager
