Appendix **Sync Serial Configuration**

Chapter contents

Overview	4
Configuration Overview	4
Web Management Interface (WMI)	5
Command Line Interface (CLI).....	6

Overview

This chapter describes how to configure the sync serial interface on 3034/3038 models. The sync-serial interface provides a V.35 or X.21 interface depending on the hardware configuration.

Note The menu, commands, and features for your model may vary slightly from what is shown in this manual. Some models may not include all of the features mentioned. Refer to the model's *User Manual*, available online at www.patton.com/manuals, to see which features are available.

Configuration Overview

When using two 3038s as statistical multiplexers, the sync serial interface (labeled *Composite* on the unit—V.35 or X.21) allows connectivity across a WAN link.

To configure sync serial settings through the WMI,
see the section “[Web Management Interface \(WMI\)](#)” on page 5.

To configure sync serial settings through the CLI,
see the section “[Command Line Interface \(CLI\)](#)” on page 6.

Web Management Interface (WMI)

To access the statistical multiplexer main page, click on **Interface Configuration > Sync Serial** from the menu on the left of the screen.

The screenshot shows the 'Sync Serial Device Management' page. At the top right, there are 'Logout' and 'Hostname: (none)' buttons. On the far right, there is a 'Save' button. The left sidebar has a tree view with nodes like 'Patton Home Page', 'Home', 'System', 'Interface Configuration' (which is expanded to show 'IP Interface', 'VLAN', 'Bridge Group', 'Terminal', 'IPSEC', 'GRE', 'PPP', 'PPTP Client', 'PPTP Server', 'ARP', 'DHCP Server', 'NAT', and 'Sync Serial'). The main content area is titled 'Sync Serial Device Management'. It contains two sections: 'V.35 DTE Status' and 'Configuration'. The 'V.35 DTE Status' section lists port settings: CD: OFF, CTS: OFF, DSR: OFF, DTR: ON, RTS: OFF. The 'Configuration' section contains two checkboxes: 'Clock Invert:' and 'Enabled:', both currently unchecked. Below these is a 'Submit' button.

Figure 1. Sync Serial Device Management page

The **Sync Serial Device Management** main page displays the current state of the sync serial port (V.35 or X.21). You can also select to invert the clock signal and enable/disable the port. Click **Submit** to save your settings.

Command Line Interface (CLI)

Table 1. Stat Mux- CLI Commands

Step	Explanation
configure controller sync-serial	Enter the sync-serial interface configuration mode.
clock	Set the parameters.
clock invert	Invert the clock signal.
clock rate <4K-7168K>	Set the generated clock sample rate in the range from 4K to 7168K (DCE interface only).
[no] shutdown	Enable or disable the sync-serial interface.
status	Display the status and configuration of the sync-serial interface.
show controller sync-serial	Display the status and configuration of the sync-serial interface.

Example – show controller sync-serial command:

```
V.35 DTE Serial Device Status
CD:          OFF
CTS:         OFF
DSR:         OFF
DTR:         ON
RTS:         OFF
Clock Invert: False
Enabled:      False
```
