

#### Application Overview

This example network shows a SmartNode 4552 used as a Voice over IP access router and gateway. The SmartNode provides access to the Internet through an access modem. The modem is connected to the SmartNode through its Ethernet interface. Hence any access technology is supported e.g. cable, DSL, wireless etc. In this example it is assumed that Internet access is provided through an xDSL modem. It is typical for such networks that access and IP Address is delivered by PPPoE (verify with Provider).

Further the SmartNode provides access to an SIP based IP telephony service using a SIP-server. Towards the LAN the SmartNode acts as a DHCP server.

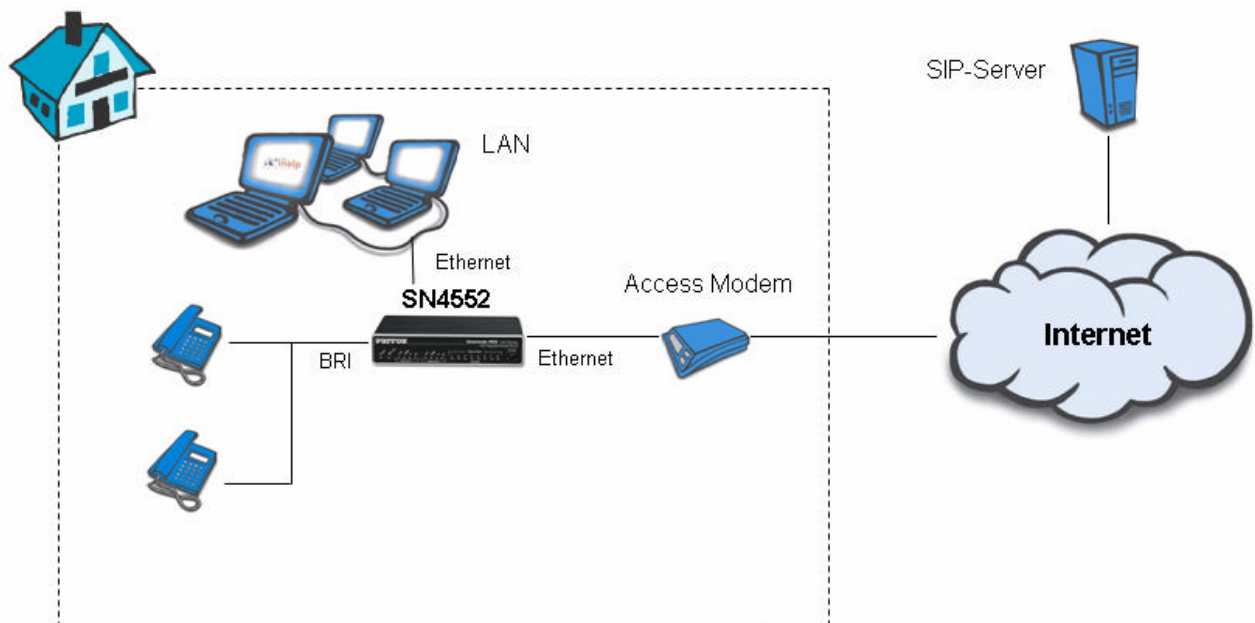

Figure 1: Schematic diagram of the example network

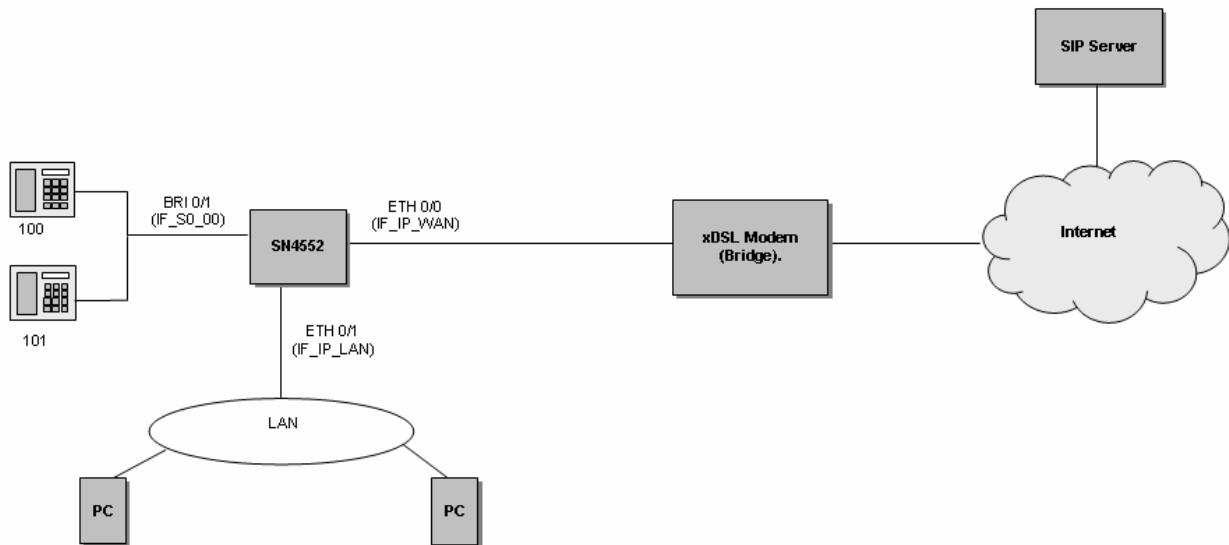

Figure 2: Detailed schematics of the complete network

Figure two presents the details of the example network i.e. SmartNode physical interfaces connected to the network (logical in brackets) and third party equipment. These things may be different in your network and must be adapted. Within the next section you find a detailed description about how to adapt the configuration.

**Note that this Configuration Note provides a basic setup which is intended to get you started quickly and make a first call. In some cases the minor adaptations described hereafter will be sufficient for your network. However, the SmartNode has many additional configuration options which allow to fit the product in various network scenarios. Please consult the SmartWare Software Configuration Guide for the complete configuration documentation.**

### **How To Adapt To Your Network**

The configuration file is available as an ASCII file (.cfg) file. You can edit the configuration file with any text editor (MS Word, Wordpad). Save changed files in text (.txt) format.

The configuration file contains comments (lines with a leading #) with instructions where and how to change the parameters which may need to be adapted to your network. Please replace the variables to valid parameters without brackets, e.g. <IF\_IP\_LAN> → 192.168.1.1

For instructions on how to download the configuration using a TFTP server to the SmartNode please consult the **Quick Start Guide**.

Note: Please follow the instructions in the Quick Start guide **exactly - step by step** to insure that the configuration is activated correctly!

### ***Contacting Patton***

If you have any questions please feel free to contact Patton's Technical Support:

- E-mail support—e-mail sent to support@patton.com will be answered within 1 business day
- Telephone support—standard telephone support is available five days a week—from 8:00 am to 5:00 pm EST (1300 to 2200 UTC)—by calling +1 (301) 975-1007

### ***Limitation of Liability***

Information in this document is subject to change without notice and does not represent a commitment on the part of Patton Electronics Company (Patton). Under no circumstance, including Patton's negligence, shall Patton be liable for any incidental, special, or consequential damages, including lost profits, that result from the use or inability to use the product or related documentation, even if Patton has been advised of the possibility of such damage. Some jurisdictions do not allow the limitation or exclusion of liability for incidental or consequential damages, so the above may not apply to you. In no event shall Patton's total liability to you for damages, losses, and causes of action exceed the amount paid by you for the Patton product.
