The SmartNode 10100 enables the delivery of VoIP services by bridging voice traffic between the public switched telephone network (PSTN)—based on time-division multiplexing (TDM)—and IP networks such as the Internet. Service providers are adding VoIP capabilities to their networks, whether to reduce costs when interconnecting with other carriers, to cost-effectively build out their network footprints, or simply to transport voice traffic across their IP backbones. Whether sitting at the network core or at the edge, SmartNode media gateways enable service providers to introduce VoIP into their networks while maintaining the quality and the reliability of traditional TDM networks.

**TDM interfaces**

Service providers, whether providing local, long-distance or international voice services, are interconnected with a multitude of other providers using T1/E1/J1 links. It is critical for service providers to be able to rapidly establish new interconnections without having to always deploy new devices. SmartNode 10100 Series media gateways therefore offer flexibility and can be configured to support T1/E1/J1 interfaces.

**Signaling and control protocols**

Just as flexibility in the selection and deployment of TDM links is a key requirement for service providers, the need to support multiple signaling protocols across various carrier partners is just as important. Each SN10100 media gateway provides support for the concurrent use of ISDN, SS7/C7, CAS (R2), SIP, and SIGTRAN signaling in the same device. The ability to provide both switching and conversion across multiple TDM and IP signaling protocols at once is paramount to enabling the operational flexibility and cost savings that drive service providers to expand their carrier relationships and converge their networks.

In parallel with the TDM and IP signaling protocols mentioned above, SN10100 devices also support the H.248 media gateway control protocol, which enables any H.248-compliant 3-party softswitch to control a media gateway. While the softswitch manages call control interactions, the SN10100 handles transmission of call media as well as any required transcoding.
Media handling

Service providers will use one or more codecs on their VoIP networks according to their desire to save bandwidth, to provide a certain level of voice quality, or simply to interoperate with other VoIP devices or providers. The ability to support multiple different concurrent codecs and to allocate them in real time based on traffic is the key to delivering true network convergence.

SmartNode 10100 gateways feature extensive support for various wireline, mobile and IP telephony audio formats, delivering seamless transcoding in real-time. The media gateways ship with support for G.711, G723.1, G.726, and G.729ab right out of the box, with no additional license fee required. They also offer optional support for mobile and IP vocoders such as AMR, AMR-WB (G.722.2), GSM-FR/GSM-EFR, EVRC/QCELP, G.728, G.729eg, and ILBC. SN10100 gateways offer independent dynamic codec selection per channel. This means that it is possible to assign different vocoders to different channels, on a channel-by-channel basis. The devices can then run all of these codecs concurrently and do so with no impact on system performance.

SN10100 gateways also provide unparalleled support for Internet-based fax, also known as Fax over IP or Fax relay, using the T.38 protocol, which is used to carry fax communications over an IP network. (They also support the T.30 protocol for fax over the PSTN.)

System density

SN10100 gateways feature the industry’s highest system density in a 1U form factor. Beside the capital savings achieved by purchasing less units of equipment, system density also provides operational cost savings in the form of reduced co-location fees as well as lower power and cooling costs.

Energy efficiency

For many, if not most, service providers, the payoff from reducing energy use can be particularly impressive; typically, for every watt of power required to operate a device, another watt is required to cool it. The SN10100 media gateways can play a major role in reducing energy costs, with an average two-thirds less power consumption than competing products of similar capacity.

Provisioning and maintenance

For network convergence efforts to contribute positively to revenue and profitability, service providers must maintain their reputation for uptime and availability during the introduction, operation, and maintenance of new services. The SN10100 offers OAM&P, an operations, administration, maintenance, provisioning (OAM&P) solution. OAM&P enables the service provider to perform the initial set-up of the SN10100 media gateway and any subsequent maintenance operations. These range from the simple, such as the collection of statistics and alarms, to the more complex, such as system configuration changes, the addition of new hardware or software components, and the application of software patches or software upgrades.

Enterprise Application

In the Enterprise market, SmartNode now offers a solution to the large Enterprise. We are substantially increasing TDM/digital port density to be the best and most reliable high-density Media Gateway going from 128 up to 256 VoIP calls.
In the Carrier market, the SmartNode has become a preferred advanced CPE and the SmartNode 10100 expands the portfolio with a high traffic CPE.

In addition, the SmartNode 10100 expands our reach onto the Carrier as the Media Gateway is a key component for applications at the Carrier operational level as well as in connecting advanced value-added services.
Specifications

**Capacity and voice processing**

- VoIP channels: 128 to 256
- PSTN interfaces: Dual Rj48c for Btis or T1/E1 for signaling
- VoIP interfaces: Dual 100/1000Base-T
- RJ45 connectors on rear of unit

**Vocoding**

- Universal codecs: G.711, G.722.1, G.726, G.729ab, T.38
- Other codecs: G.722.2 (AMR-WB), G.728, G.729eg, iLBC, clear mode (RFC 4040)

**Voice activity detection (VAD)**

- 32x545

**Simultaneous signaling support**

- SIGTRAN — M2PA, M1UA, M3UA, IUA
- SS7 termination and/or relay supported
- SS7 — Up to 64 x MTP2 links (56, 64, n x 56/64 kbps, HSL), Multiple redundant MTP2 links — Up to 64 MTP3 originating point codes and linksetks — ISUP variants: ITU-T, ITU-T, ANSI 88, ANSI 92, ANSI 95, Telcordia 97, ETSiV2, ETSiV3, China, Singapore, UK, Brazil
- ISDN PRI— Q.931 ISDN PRI: NI-2, 4ESS, 5ESS, DMS-100, DMS-250, Euro ISDN ETSI NETS (France, Germany, UK, China, Hong Kong, Korea), IIT (Japan), Australia
- CAS — MFC R2 (standard ITU, Brazil)
- Customizable protocol script files

**SmartNode-CONTROL**

- Standalone call control — Any to any call routing (TDM-VoIP, TDM-TDM, VoIP-VoIP with transcoding) — Call routing based on: trunk group, calling/called numbers, nature of address, ASR, time of day, load-based, cost-based, TO,
- FROM: Request URI, redirect numbers, and other parameters — NPA-NXX routing (100k+ table entries, Excel or CVS file upload) — Route retries — Call transfers (REFER, AT&T TR 50075)
- H.248 (Megaco) call control — ITU-T H.248 versions 1 and 2 — UDP, SCTP
- IPsec transport — DTMF and fax detection — DTMF, announcements and call progress tone generation — Call quality and inactivity alerts
- Session management and billing — SIP peer availability polling — RTP inactivity monitoring — CDR generation (RADIUS and text file)

**Environmental**

- Dimensions: 1U, 1.719H x 17.4W x 16D in. (43.66H x 442W x 406D mm)
- Weight: 20 lbs (9.1 kg)
- Regulatory compliance
  - EN55022:2006, Class A, EN60950, EN61000, ETS 300 386
- **Performance**
  - Operating temp: —0 to +55 °C — 95% relative humidity, non-condensing
  - Storage temp: —10 to +75 °C, 95% relative humidity, non-condensing
  - NEBS Level 3 compliant
  - RoHS compliant

**Ordering Info**

- SN10100/4E/48: SmartNode SmartMedia Gateway 4 E1/T1, 120 VoIP Channels with Standard Signaling Set. Universal AC Power
- SN10100/8E/48: SmartNode SmartMedia Gateway 8 E1/T1, 240 VoIP Channels with Standard Signaling Set. Universal AC Power
- SN10100/8E/48: SmartNode SmartMedia Gateway 8 E1/T1, 240 VoIP Channels with Standard Signaling Set. Universal AC Power
- SN10100/8E/48: SmartNode SmartMedia Gateway 8 E1/T1, 240 VoIP Channels with Standard Signaling Set. Redundant 48V DC Power
- SN10100/8E/48: SmartNode SmartMedia Gateway 8 E1/T1, 240 VoIP Channels with Standard Signaling Set. Redundant 48V DC Power
- SN10100/8E/48: SmartNode SmartMedia Gateway 8 E1/T1, 240 VoIP Channels with Standard Signaling Set. Redundant 48V DC Power
- SN10100/8E/48: SmartNode SmartMedia Gateway 8 E1/T1, 240 VoIP Channels with Standard Signaling Set. Redundant 48V DC Power
- SN10100/8E/48: SmartNode SmartMedia Gateway 8 E1/T1, 240 VoIP Channels with Standard Signaling Set. Redundant 48V DC Power
- SN10100/8E/48: SmartNode SmartMedia Gateway 8 E1/T1, 240 VoIP Channels with Standard Signaling Set. Redundant 48V DC Power

**Upgrades & Options**

- SNSW-1-SS7: SN SmartMedia Single Link SS7 MTP2, MTP3, ISUP License
- SNSW-2-SS7: SN SmartMedia SS7 MTP2, MTP3, ISUP 2-Link License
- SNSW-4-SS7: SN SmartMedia SS7 MTP2, MTP3, ISUP 4-Link License
- SNSW-8-SS7: SN SmartMedia SS7 MTP2, MTP3, ISUP 8-Link License
- SNSW-16SS7: SN SmartMedia SS7 MTP2, MTP3, ISUP 16-Link License
- SNSW-32-SS7: SN SmartMedia SS7 MTP2, MTP3, ISUP 32-Link License
- SNSW-64-SS7: SN SmartMedia SS7 MTP2, MTP3, ISUP 64-Link License
- SNSW-1plus-SS7-1: SN SmartMedia Single Link MTP2, MTP3, ISUP License Upgrade
- SNSW-M2PA-SIGTRAN: SN SmartMedia SIGTRAN Termination License for M2PA
- SNSW-SN10100-4E: SN SmartMedia 4 E1/T1 Software Upgrade (increases the SN10100 from 4 or 8 E1s and 120 to 240 voice channels)

**Troubleshooting**

- Per-call tracing (history and/or live) — Signalling capture tools — SS7 command-line interface

**Electric characteristics**

- Power input: —90 to 260 VAC, 47 to 63 Hz
- -40 to -60 VDC — Redundant power supply with dual power inputs
- Maximum 138 W power consumption

**Specifications**
