

and are defined in the device configuration files, provided that the template files are created with the correct Device Management tags.

The device profile created in the previous section should be assigned to the BroadWorks user. Assigning the device profile to the user automatically causes the Device Management feature to generate the device configuration files for this user's device.

To assign the device profile to the user, browse to the BroadWorks <user> → *Addresses* page and set the parameters as described in the following table.

It is expected that parameters not identified in the following table are already set or are self-explanatory.

Parameter	Value	Description
Identity/Device Profile Name	<device-profile-name> Example: BSFT_IOP_SN4110	From the drop-down list, select the device profile instance created in the previous section.
Line/Port	<SIP register address-of-record> Example: 8881001023@as.iop1.broadworks.net	Supply the desired SIP register Address-of-Record.

Example User Addresses Settings

The screenshot shows the 'Addresses' configuration window. At the top, there are 'OK', 'Apply', and 'Cancel' buttons. Below them, the 'Phone Number' is set to 8881001023 and is 'Activated'. The 'Extension' is 1023. There are radio buttons for 'Identity/Device Profile' (selected), 'Trunking', and 'None'. Under 'Identity/Device Profile', the 'Identity/Device Profile Name' is 'BSFT_IOP_SN4110 (Group)' with a 'Configure Identity/Device Profile' link. The 'Line/Port' is '8881001023@as.iop1.broadworks.net' with an 'AdvancedSettings' link. Below this, there is an 'Aliases' section with the text 'sip: jodmstest@as.iop1.broadworks.net'. There are three rows of 'sip:' fields, each with a dropdown menu set to '@as.iop1.broadworks.net'. At the bottom, there are 'OK', 'Apply', and 'Cancel' buttons.

Figure 12 Assign Device Profile to User

5.2.5 Configure Edge Device

In many deployments, an edge device is deployed on the enterprise edge. Configure the edge device SIP server setting with the service provider's session border controller IP address or FQDN.

To integrate the edge device with Device Management, the SBC address tag (%SBC_ADDRESS%) defined in section 5.2.1.1 *Create System Default Tags* must be overridden at the group level with the LAN address of the edge device. At the *Group* → *Utilities* → *Configure Device* page, select the Patton device profile (example: Patton_SmartNode_2-8_FXS). Perform the following steps.

- 1) Click on the *Custom Tags* tab.
- 2) Click **Add**.

- 3) Add the SBC tag.
- 4) For the tag, enter "SBC_ADDRESS".
- 5) For the value, enter the IP address (that is, the edge device LAN IP address).
- 6) To save the tag data, click **OK**.

This Tag/Value is applied to all Patton model phones in the group using the modified *Device Profile Type*.

Repeat for each Patton model provisioned in the group.

5.2.6 Configure Patton SmartNode

This section describes the steps necessary to configure the Patton SmartNode for integrating with BroadWorks Device Management.

- 1) Connect to the SmartNode. You can access the SmartNode through Telnet/SSH using options A or B below, depending on the model of your SmartNode.
 - Ethernet port 0/0 acts as a DHCP Client so it will take a DHCP address from your networks DHCP Server. You can then use the SmartNode Discovery tool to find the IP address assigned to the unit.

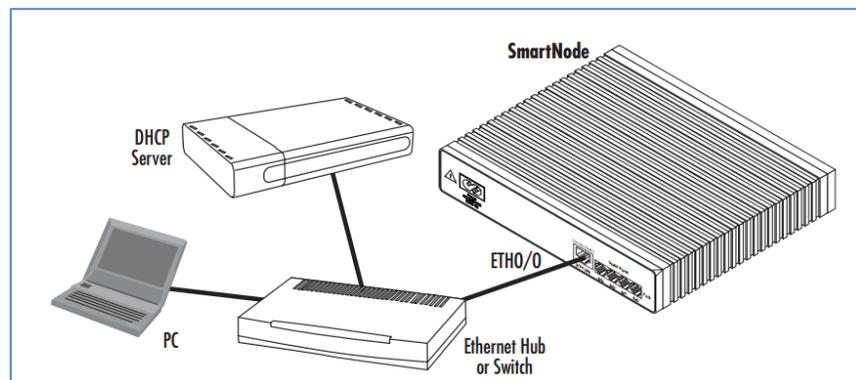

Figure 13 SmartNode as DHCP Client

- Ethernet port 0/1 acts as a DHCP Server. You can connect this directly to your computer and it can receive a DHCP address from the SmartNode.

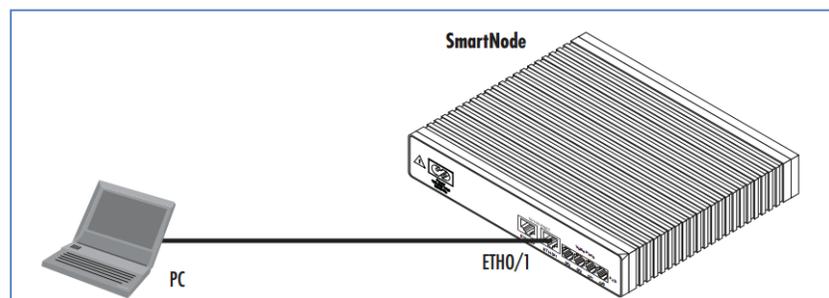

Figure 14 SmartNode as DHCP Server

- 2) Once connected, you will see a login screen. The factory default username is *administrator* and the password is left blank.

Example:

```
login: administrator
password:
10.10.50.106>
```

- 3) Once logged in, you will need to configure the following to enable the auto provisioning.

Example (update the server address and device access URI per deployment environment):

```
enable
configure
profile provisioning PF_PRO_BROADSOFT
destination configuration
location 1 http://xsp.iop1.broadworks.net/dms/Patton_2-8_FXS_DM/Patton_$(system.mac).cfg
location 2 http://xsp.iop1.broadworks.net/dms//Patton_2-8_FXS_DM/Patton_$(system.mac).cfg
location 3 http://199.19.193.16/dms/Patton_2-8_FXS_DM/Patton_$(system.mac).cfg
activation reload immediate
provisioning execute PF_PRO_BROADSOFT
```

- 4) Once step 3 is configured, the Patton SmartNode will execute the provisioning request to the BroadWorks server, GET the configuration stored and then reload itself.

Your Patton SmartNode is now configured and ready for service.
